

ARDHNARISHWAR AI ROBOTICS INTERVIEW REPORT

Automated Assessment & Technical Competency Analysis

Candidate: Dr. Marcus Vance (marcus.vance@stanford.alumni.edu)

Company: Apex Robotics Inc | Role: Senior Autonomous Navigation Engineer (ROS2 / SLAM) | Dept: Perception & Autonomy

Overall Competency Score: 48.1 / 100

AI Recommendation: REJECT

Engine Version: internal-v1 | Confidence: 92%

Competency Breakdown

Technical: 41.5% Problem Solving: 44.8% Communication: 94.4% Behavioral: 27.2%

Key Strengths Identified

- + High verbal fluency with minimal filler words.
- + Well-paced, concise sentence composition.
- + Demonstrated solid understanding of 4 key concepts (imu, odometry, lidar).
- + Referenced key tooling & framework components (EKF).

Areas for Improvement / Missing Topics

- Did not adequately address: forward kinematics, inverse kinematics, jacobian.
- Response was too brief and lacked mathematical or architectural detail.
- Omitted measurable business/technical impact or final result of the situation.
- Did not clearly establish background context before describing actions.
- Missing Core Concept: forward kinematics
- Missing Core Concept: inverse kinematics
- Missing Core Concept: jacobian

Question-by-Question Detailed Assessment

Q1 Score: 28.2/100 (Technical)

Feedback: Candidate scored 28.2/100 on Robotics Kinematics. Technical alignment: 10.0%, Communication fluency: 100.0%.

Q2 Score: 59.3/100 (Technical)

Feedback: Candidate scored 59.3/100 on Autonomous Navigation & SLAM. Technical alignment: 51.4%, Communication fluency: 85.0%.

Q3 Score: 71.5/100 (Technical)

Feedback: Candidate scored 71.5/100 on Real-Time Systems & Architecture. Technical alignment: 63.0%, Communication fluency: 98.1%.
